

#1 Baker

THE
BAKER
Motor Vehicle
Company,
Cleveland, Ohio.

The "Baker" Electric Runabout.

Is a pleasing combination of advanced mechanical construction and correct carriage design.

The "Baker" Electric Runabout.

SPECIFICATIONS.

Controller.

This is a very simple mechanism with two speeds, forward and backward, which are quickly obtained with lever.

Light.

Small electric head-light is attached to front center of body, and is immediately available by turning switch.

Volt-Ammeter.

Each carriage is equipped with a Weston Standard Volt-Ammeter. By the use of this meter the operator can at all times see just the condition the batteries are in.

General.

Our runabout with batteries charged is instantly available for service, and may be left inoperative when and as often as desired without loss or danger. The control and driving of vehicle are readily acquired, and this vehicle is particularly recommended as suitable for the lady driver.

Capacity.

Two persons.

Mileage.

With level macadam or paved streets, 20 miles are easily made on one charge of the batteries.

Speed.

Two speeds of six and twelve miles per hour.

Weight.

Carriage complete weighs 650 pounds.

Price.

\$850.00 f. o. b. Cleveland.

Terms.

\$250.00 down, balance when carriage is ready for shipment.

THE "BAKER"
ELECTRIC RUNABOUT.

Manufactured by
The Baker Motor-Vehicle Co.
Cleveland, Ohio, U. S. A.

The "Baker" Electric Runabout.

THE BAKER MOTOR-VEHICLE COMPANY offer their Electric Runabout to the large class of purchasers that would prefer absolute safety in combination with a light weight, easy running and simple wagon, to the uncertainties of the Explosive Motor or Steam Driven Vehicle.

We are aware that the majority of intending purchasers of Automobiles are neither amateur or professional mechanics, and that their ideal carriage must be of such construction as will obtain the minimum need of expert repairing.

For the present we shall make but this one style of vehicle and shall make an honest endeavor to do this well.

We employ the best mechanical skill obtainable and intend that every vehicle made shall give its purchaser a full measure of satisfaction.

Any further information will be cheerfully and promptly furnished.

Yours very truly,

The Baker Motor-Vehicle Co.

Cleveland, Ohio, U. S. A.

The "Baker" Electric Runabout
Insures

Maximum { Efficiency

Trouble }

The "Baker" Electric Runabout.

SPECIFICATIONS.

Running Gear.

Made of best seamless tubing, thoroughly pinned and brazed and of a design affording great strength. (See cut.)

Wheels.

28-inch Front and Rear. Tires are 2-inch best rubber pneumatic. Spokes and Hubs are constructed of a composition metal absolutely rust proof.

Bearings.

Specially designed Ball Bearings on all working parts, including motor and steering head.

Battery.

Ten cells of best quality obtainable, packed five cells in a tray, which are placed under the seat.

Motor.

Our motor is of special design: is of great efficiency and equipped with Baker self-aligning Ball Bearings, therefore seldom requiring oil or attention.

Body.

Piano Box with sufficient room for two persons. Extra Room in rear for packages.

Brakes.

One brake (on motor) is immediately applied by the one operation that shuts off the current, by pulling back the controlling lever. This brake is sufficient for all ordinary needs, although another powerful friction brake is applied to rear wheels by pressure of right foot on brake lever. This brake need only be used in cases of emergency or when you wish to leave carriage on an incline.
